

Activity Based Funding Mental Health Care National Best Endeavours Data Set 2017-2018 Overview

Data set specifications

National data collections are essential to the development of classifications and activity based funding (ABF). They are required for a number of purposes, including:

- ensuring that activity is categorised into meaningful groups
- analysing activity volumes between local health networks and jurisdictions
- monitoring trends over time.

National data collections are described in the format of data set specifications (DSS). National Best Endeavours Data Sets (NBEDS) describe DSS that are not mandated for national collection, but there is a commitment to provide data nationally on a best endeavours basis. They contain a set of data items to be collected in combination with an agreed set of instructions, definitions and output values.

The Independent Hospital Pricing Authority (IHPA) develops NBEDS in accordance with national standards and NBEDS are published in the Australian Institute of Health and Welfare's national metadata repository known as METeOR.

Activity Based Funding: Mental Health Care National Best Endeavours Data Set

The Activity Based Funding: Mental Health Care Data Set Specification (ABF MHC DSS) 2015-16 was first endorsed as an IHPA standard DSS in December 2014. It was reclassified to the ABF MHC NBEDS in 2016-17 and has been updated annually to meet the ongoing requirements of the Australian Mental Health Care Classification.

Scope

The scope of the ABF MHC NBEDS 2017-18 is consumers receiving mental health care that is associated with Australian public hospitals. Mental health care is care in which the primary clinical purpose or treatment goal is improvement in the symptoms and/or psychosocial, environmental and physical functioning related to a patient's mental disorder. Mental health care:

- is delivered under the management of, or regularly informed by, a clinician with specialised expertise in mental health;
- is evidenced by an individualised formal mental health assessment and the implementation of a documented mental health plan; and
- may include significant psychosocial components, including family and carer support.

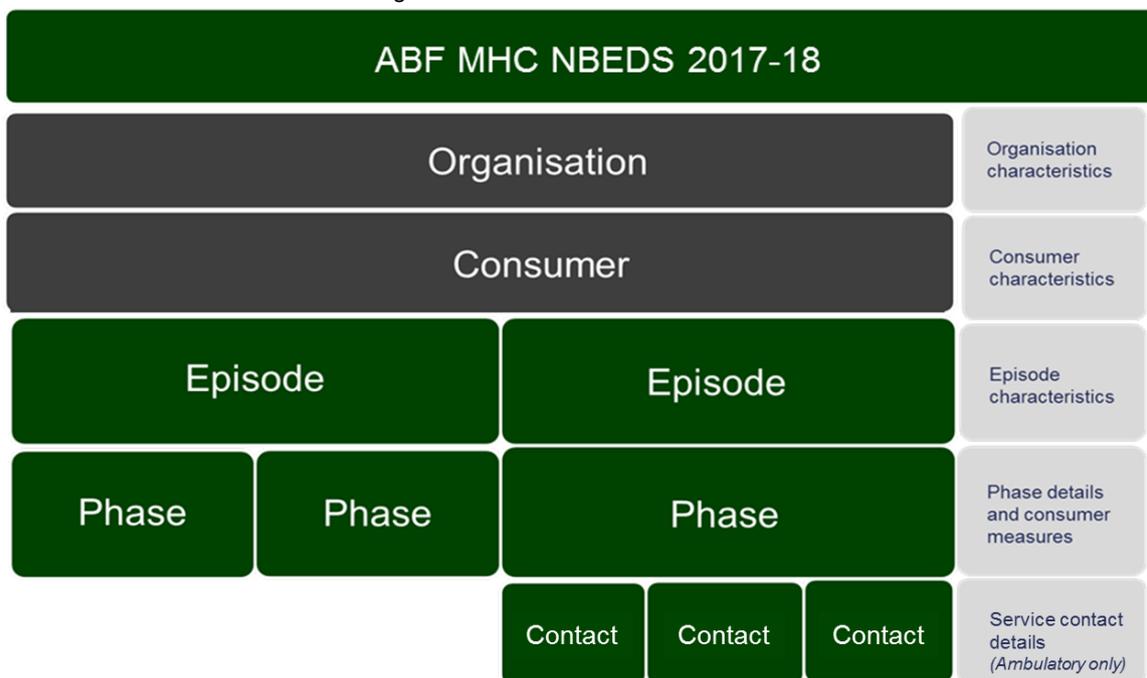

The ABF MHC NBEDS 2017-18 includes consumers receiving mental health care in the admitted hospital, ambulatory (community) and residential settings. It encompasses mental health care provided to all age groups, including children and adolescents, adults and older persons.

Structure

The ABF MHC NBEDS 2017-18 contains data elements which are required to be reported for all settings of mental health care and all age groups. The NBEDS requires reporting of activity according to patient episodes of mental health care and mental health phases of care. For ambulatory (community) care, individual service events or contacts are also reported.

The high level structure of the ABF MHC NBEDS 2017-18 is illustrated at Figure 1.

Figure 1: ABF MHC NBEDS 2017-18 high level structure

Data elements

The ABF MHC NBEDS 2017-18 includes data elements required to describe organisation, consumer and episode characteristics, mental health phase of care details and measures which describe consumer diagnoses, functioning and symptoms. The NBEDS contains all the data elements required to assign a mental health phase of care to a class in the AMHCC version 1.0.

Some data elements are required to be reported for all settings of mental health care and age groups, while other data elements are specific to a particular setting or age group. Some data elements are required to be collected for each mental health care episode, while other data elements require collection at each mental health phase of care or for each service event.

The data elements which describe organisation, episode and consumer characteristics are required to be reported for all settings and for all age groups, and require collection at each patient episode of mental health care. These data elements include:

- Organisation/service identifiers
- Person identifiers
- Date of birth
- Sex
- Marital status
- Indigenous status
- Country of birth
- Area of usual residence
- Episode start and end date
- Episode start and end mode
- Mental health phase of care start and end date
- Mental health phase of care
- Leave days
- Principal diagnosis
- Additional diagnoses

The data elements which describe consumer functioning and symptom severity require collection at the commencement or change of a mental health phase of care. These data elements include:

- Health of the Nation Outcome Scales for Children and Adolescents (HoNOSCA)
- Health of the Nation Outcome Scales (HoNOS)
- Health of the Nation Outcome Scales for Older Persons (HoNOS 65+)
- Children's Global Assessment Score (CGAS)
- Factors Influencing Health Status (FIHS)
- Abbreviated Life Skills Profile (LSP-16)
- Resource Utilisation Groups - Activities of Daily Living (RUG-ADL)

Collection protocols for these consumer measures vary depending on the setting of care and the age of the consumer. A summary of the collection protocols is in Table 1.

Table 1: Collection protocols for phase level consumer functioning and symptom severity measures

	Admitted Episode		Ambulatory Episode		Residential Episode	
	Phase 1	Phase 2 +	Phase 1	Phase 2 +	Phase 1	Phase 2 +
Children/ Young Adults						
HoNOSCA	✓	✓	✓	✓	✓	✓
CGAS	✓	✓	✓	✓	✓	✓
FIHS	✕*	✓	✕*	✓	✕*	✓
Adults						
HoNOS	✓	✓	✓	✓	✓	✓
LSP-16	✕	✕	✓*	✓*	✓*	✓*
Older Adults						
HoNOS 65+	✓	✓	✓	✓	✓	✓
LSP-16	✕	✕	✓*	✓*	✓*	✓*
RUG-ADL	✓	✓	✕	✕	✓	✓
<p>✕* The FIHS is reported at the start of the second and subsequent phases within an episode. If an episode only has one phase, then the FIHS is reported at the end of the phase.</p> <p>✓*The LSP-16 is assessed and reported at the start of the first phase. If an episode is longer than 3 months, than the LSP-16 score from the initial assessment is reported at the start of each new phase, however will not need to be re-assessed until the next new phase that falls after the 3 month period.</p>						

Some data elements are only relevant to ambulatory (community) service events and therefore only require collection in the ambulatory setting and for each service event. These data elements include:

- Service contact date
- Patient/client participation indicator
- Group session status
- Patient episode setting

Further information

ABF MHC NBEDS 2017-18

The complete NBEDS and associated metadata is available on METeOR through the following link: <http://meteor.aihw.gov.au/content/index.phtml/itemId/639992>

ABF MHC NBEDS 2017-18 technical specifications

The technical specifications are a companion document to the NBEDS which outlines the reporting requirements for the provision of data against the ABF MHC NBEDS 2017-18 by state and territory governments. This document provides details about the:

- content and key concepts included in the ABF MHC NBEDS 2017-18
- business rules relating to the reporting of the data items
- frequently asked questions relating to the ABF MHC NBEDS 2017-18.

The technical specifications are available on IHPA's website.

https://www.ihoa.gov.au/sites/g/files/net636/f/abf_mhc_nbeds_2017-18_technical_specifications.pdf

ABF MHC NBEDS 2017-18 data request specifications

The data request specifications (DRS) outline the technical requirements for data submission, for example:

- the format of the data submission file
- acceptable data values
- data submission file structures and linking relationships
- edit checks to be applied to the data.

The DRS for 2017-18 are available on IHPA's website.
