B. Introduction

B.1 Evolution of the Tier 2 national index

The Tier 2 non-admitted services classification is currently used as the basis for the Australian Government's funding of public hospital non-admitted services.

The Tier 2 non-admitted serves national index (national index) was developed in 2012 to form part of the Tier 2 classification system to assist jurisdictions with the classification of non-admitted hospital services.

Since its implementation, the national index has undergone regular revisions to reflect the annual review of the Tier 2 classification. Each revision of the national index is valid for a particular version of the Tier 2 non-admitted services definitions manual.

The national index is an alphabetic index to the Tier 2 non-admitted services definitions manual. The purpose of the index is to assist users of the Tier 2 classification in allocating local clinics to a Tier 2 class in a consistent manner. The index contains terms used within the definitions manual and is not intended as an exhaustive list of local clinic names or terms.

B.2 Version History

Document name	Details
Tier 2 National Index 2013-14	Endorsed by NACAWG in September 2013. Valid for Tier 2 non-admitted services definitions manual version 2.0, 2013-14
Tier 2 National Index 2014-15	Review and Updated. Final copy endorsed by NACAWG at 26 March 2014. Valid for Tier 2 non-admitted services definitions manual version 3.0, 2014-15.

C. Components of the Tier 2 classification system

When Tier 2 is being used for the purpose of ABF, the non-admitted services national index should be read in conjunction with the:

- Non-admitted patient care data set specifications
- Tier 2 non-admitted services compendium
- Tier 2 non-admitted definition manual.

Using these documents together will assist with consistent allocation of non-admitted services to a Tier 2 class.

C.1 Non-admitted patient care data set specification

These documents contain the data items required to be reported on a quarterly basis to the Independent Hospital Pricing Authority (IHPA) for non-admitted service events. Jurisdiction and health service staff should refer to these documents for further information on:

- the scope of non-admitted activity that is required to be reported to IHPA
- a list of the data items which are required to be reported
- a list of values, instructions and collection guidelines for all of the data items.

There are three data set specifications (DSS) relating to non-admitted services:

- Non-admitted patient DSS – used to collect information for each non-admitted patient service event at each clinic of a facility
- Non-admitted patient care hospital aggregate national minimum data set (NMDS) – used to collect the total service events per Tier 2 class for an establishment.
- Non-admitted patient care local hospital network aggregate DSS – used to collect the total service events per Tier 2 class for a local health network service.

C.2 Tier 2 non-admitted services compendium

This document provides guidance on the counting and classification rules associated with the Tier 2 classification. It provides business rules and examples to assist with consistent counting, classification, and reporting of non-admitted activity data at a national level.

C.3 Tier 2 non-admitted services definitions manual

This is the classification manual for Tier 2 – jurisdiction and health service staff should refer to this document for further information on each Tier 2 class, including:

- definitions
- usual provider
- affected body system
- guides for use
- inclusion criteria
- exclusion criteria
- administrative information.

D. Tier 2 classification structure

D.1 Structure Overview

Tier 2 classes provide a consistent framework for grouping clinics that provide non-admitted patient service events. At the group level, the classification is based on the nature of the health service provided, whilst at the class level the classification distinguishes between groups based on the predominant specialisation of the clinic. This is consistent with the use of Major Diagnostic Categories (MDC) in the Australian Refined Diagnosis Related Groups (AR-DRG) classification, which organises Diagnosis Related Groups (DRGs) into 24 categories based on their clinical attributes.

D.2 Groups

Groups are the broadest level of Tier 2 and are formed to reflect the predominant nature of the health service being provided, whether procedural, diagnostic or consultative (provided either by general physician, allied health, clinical nurse or other specialist). Healthcare provider is often a good indication as to the nature of the predominant health service the clinic provides, however these are based on typical traditional providers of the service and so should be used as a guide only. In particular, they may not be reflective of the provision of the health service in smaller settings that may make more use of general clinicians. Please refer to Tier 2 non-admitted services compendium chapter 2 *Healthcare provider* for more information.

Group	Description	Range of classes
Procedures	Procedures provided by a surgeon or other medical specialist	10.01 – 10.20
Medical consultation	Medical consultations provided by a general physician or medical specialist	20.01 – 20.52
Stand-alone diagnostic	Diagnostic services, within a specific field of medicine or condition (e.g. epilepsy)	30.01 – 30.08
Allied health and/or clinical nurse specialist intervention	Services provided by an allied health professional or clinical nurse specialist	40.01 – 40.60

D.3 Classes

Classes are the most detailed level of Tier 2 and are formed to reflect the predominant specialisation of the clinic. Specialisation may be formed around the clinician, patient condition, patient population group or type of care.

E. Instructions for Use

A clinic should never be classified to a Tier 2 class directly from the alphabetic index. After locating a Tier 2 class in the index, refer to the Tier 2 Non-Admitted Services Definitions Manual. The definitions manual provides more detailed information on the definition of service, inclusions and exclusions.

The design of the index is set out as follows:

Lead Term (type of condition being treated); type of service administrator - Tier 2 Non-Admitted Services Definitions Manual class

The following steps are recommended when using the index:

1. Identify the type of clinic in terms of:
 - a) The nature of the service provided
 - b) The condition or disease process the clinic provides services for
 - c) The discipline and specialty of the health professional(s) providing the service.
2. Locate the lead term in the index. This will usually either be the type of condition the clinic treats (e.g. sleep apnoea, diabetes, respiratory) or the type of service being provided (e.g. screening, endoscopy, fitting).
3. Refer to the specified class in the Tier 2 Non-Admitted Services Definition Manual. Refer to the information and be guided by the definition of service, inclusions and exclusions lists.
4. Assign the clinic to the Tier 2 class.
